

Dry Run Exercises

Unit 5 Arrays

Complete the dry run table for each fragment of code given in the questions below. **Give** the value(s) printed out when each is executed.

Follow the module dry run style guide in your answers.

1.

```
int [] numbers = {4,5,2,5,7};           // L1
```

```
for(int i = 1; i<=2; i=i+1)           // L2
```

```
{
    System.out.println(numbers[i]);           // L3
```

}

Complete the dry run table (you may not need all rows):

[illegible]

Write EXACTLY what is printed here

```
int [] numbers = {3,4,5,6}; // L1

for(int i = 0; i<=2; i=i+1) // L2
{
    System.out.println(numbers[i]); // L3
}

System.out.println(0); // L4
```

[illegible]

```
4.
int [] numbers = {3,4,5,6,7};           // L1

for(int i = 4; i>0; i=i-1)              // L2
{
    System.out.println(numbers[i]);      // L3
}
```

Complete the dry run table (you may not need all rows):

[illegible]

Write EXACTLY what is printed here

```
int [] numbers = {4,5,2,5,7}; // L1

for(int i = 1; i<=3; i=i+1) // L2
{
    if (numbers[i] == 5) // L3
    {
        System.out.println(i); // L4
    }
}
```

Complete the dry run table (you may not need all rows):

[illegible]

Write EXACTLY what is printed here

```
int [] numbers = {4,5,2,5,7};           // L1

for(int i = 1; i<=2; i=i+1)             // L2
{
    numbers[i] = 6;                     // L3
}
```

[illegible]

```

7.
int [] a = {3,4,5,6};           // L1

for(int i = 0; i<=2; i=i+1)     // L2
{
    a[i] = i;                   // L3
}

```

Complete the dry run table (you may not need all rows):

LINE	a				i	i <= 2 ?
	[0]	[1]	[2]	[3]		

Write the final value of the array here in the form eg {4,5,2,5,7}

```
int [] a = {3,4,5,6,7};           // L1
```

```
for(int i = 0; i<4; i=i+1)           // L2
```

```
{
    a[i] = a[i+1];           // L3
}
```

Complete the dry run table (you may not need all rows):

LINE	a					i	i < 4 ?
	[0]	[1]	[2]	[3]	[4]		

Write the final value of the array here in the form eg {4,5,2,5,7}

9.

```
int [] b = {3,4,5,6,7}; // L1
```

```
for(int i = 4; i>0; i=i-1) // L2
```

```
{
    b[i] = b[i-1]; // L3
}
```

Complete the dry run table (you may not need all rows):

LINE	b					i	i > 0 ?
	[0]	[1]	[2]	[3]	[4]		

Write the final value of the array here in the form eg {4,5,2,5,7}

```
int [] numbers = {4,5,2,5,7};           // L1
for(int i = 1; i<=3; i=i+1)             // L2
{
    if (numbers[i] == 5)                 // L3
    {
        numbers[i] = numbers[i] + 1;    // L4
    }
}
```

[illegible]
