ECS401: Unit 7 Lab Progress Test

These exercises are to help you judge your progress. It is really important that you make sure you fully understand everything we have covered so far.

1. Write the header line for a method called `eat` which takes no arguments but returns a `String` result.

Answer:

Consider the following method:

```
public static void wombat (int a)
{
    String b = "1";
    System.out.println(a + " " + b);
    return;
}
```

2. What is the return type of method `wombat`?

Answer:

3. What is the formal parameter of method `wombat`?

Answer:

4. What type must arguments passed to `wombat` be?

Answer:

5. Is `wombat` a function or a procedure?

Answer:

6. Give the text that is printed to the screen when the following call is made.
`wombat (5) ;`

Answer:

7. Give the text that is printed to the screen when the following call is made.

```
int a = 4;  
wombat(6);
```

Answer:

8. Give the text that is printed to the screen when the following call is made.

```
int a = 4;  
wombat(a);
```

Answer:

9. Give the text that is printed to the screen when the following call is made.

```
int a = 9;  
int b = 7;  
wombat(a);
```

Answer:

10. Give the text that is printed to the screen when the following call is made.

```
int a = 4;  
int b = 7;  
wombat(b);
```

Answer:

11. Write a method called `checkNumber` that takes two arguments: an integer and a string. The string can be assumed to be a series of digits. `checkNumber` should check if the string holds the same number as the integer. It should return a boolean result giving the answer.

HINT: Use `Integer.parseInt` to convert the string so it can be compared with the integer.

Answer:
